Rural Entrepreneurship–An Indian Scenario

Dr. G. Vedanthadesikan

Director, Centre for Rural Development, Annamalai University, Annamalai Nagar,

P. Pathmanathan

Ph.D Scholar in Rural Management (External), Centre for Rural Development, Annamalai University, Annamalai Nagar

Abstract

The achievement of the Millennium Development Goals is at the centre of sustainable development. Sustainable rural development is vital to the economic, social and environmental viability of nations. It is essential for poverty eradication since global poverty is overwhelmingly rural.

Key Words – Entrepreneurship, Globalization, Economic Growth, Technological Effect, Government Policy

Introduction: The post independent India was left with a Himalayan task in developing its economy in general and especially the Rural Area as 80% of population live in rural village and poverty was main task to be dealt with.

There is significant progress in achieving rural development till last budget after 14 finance commission recommendations. However the result was not very satisfactory. It was observed that in many research only 20% or less than that of 20% of the benefit from the government schemes was reaching the poor and hence the total development of rural people itself was less. As such we can say that there is a need to look in to the history and research why still poverty and, under development and unemployment are existing in most of the parts of the country and especially still in rural villages.

Various studies were carried out by eminent people, research scholars and they all contributed to the extent of their specialized filed what so ever they have dealt with.

The history and statistics of rural employment generation by government, NGO and self individual's shows appreciable positive improvement. The Central Government schemes, State Government schemes, NGO'S schemes resulted considerable progress in society in terms of economic development and employment generation.

These result was not achieved in few days or few years, In fact the present position of rural development, employment etc is attained after 7 decades, 14 finance commission many yearly budget.

Each budget used to have special note towards rural ministry with enhanced allotment aiming at attainment of goals set by the various central welfare schemes towards employment for poverty.

Rural Entrepreneurship in India: Who should be capable of making use of the government policies and schemes for the betterment of rural people? Some individuals who happen to be local leaders and NGOs and who are committed to the cause of the rural people have been catalytic agents for development. Though their efforts need to be recognized yet much more needs to be done to reverse the direction of movement of people, i.e. to attract people in the rural areas. It means not only stopping the outflow of rural people but also attracting them back from the towns and cities where they had migrated. This is possible when young people consider rural areas as places of opportunities. Despite all the inadequacies in rural areas one should assess their strengths and build on them to make rural areas places of opportunities. This is much to do with the way one sees the reality of the rural areas. The way a survivor or job seeker would see things would certainly be different from those who would like to do something worthwhile and are ready to go through a difficult path to achieve their goals. It isn't that there is a dearth of people with such a mindset. But with time they change their minds and join the bandwagon of job seekers due to various complications. Enabling them to think positively, creatively and Entrepreneurship purposefully is most of the development of rural areas. Young people with such perspective and with the help of rightly channelized efforts would usher in an era of rural entrepreneurship.

The basic principles of entrepreneur which applied the rural development are:

- Optimum utilization of local resources in an entrepreneurial venture by rural population - Better distributions of the farm produce results in the rural prosperity.
- Entrepreneurial occupation rural population to reduce discrimination and providing alternative occupations as against the rural migration.
- To activate such system to provide basic '6 m'- manpower, money , material, machinery, management and market to the rural population.

Rural Entrepreneurship in changing Environment: The changing global environment raises questions about the ability of traditional, small-scale businesses in rural areas to share the potential benefits offered by the changing environment. The rapid (though declining) population growth, coupled with even faster urbanization, creates increasing demands. In India, urban populations in general grow about twice as fast as the overall total, and by 2020 they may exceed the size of rural populations. Such a major demographic trend challenges the capacities of some traditional small-scale businesses to cope with the increasing demands.

Effect of Globalization on Rural Entrepreneurship: Since globalization is a macro-concept and rural entrepreneurship is a micro-concept, occurring in a very limited area, it is very difficult to establish causal linkages, or to quantify the specific effects of globalization on rural entrepreneurship. However, it is possible to identify a range of different channels

through which various aspects of globalization can be expected to change the welfare of rural entrepreneurship in India.

1. Productivity and efficiency effect: Globalization is often said to result in higher productivity, due to the access to global markets, abilities to specialize, and to take advantages of economies of scale and scope. Exposure to the global competition can result in high levels of productivity and efficiency. However, it is less crucial for large economies like India. Again, the potential gains to rural entrepreneur are also large, because globalization enhances countries' abilities to exploit comparative advantages arising from differing natural and ecological conditions. At the level of national policy, these arguments seem to favour globalization. Still, it is very easy to see how the rural entrepreneur could still lose out. This is true in most case duet the lack of affordable facilities in rural areas. There are many other factors which place rural entrepreneurs at a disadvantage. Most of them, lack access to the technologies and market information that would enable them to comply with quality specifications and effectively respond to emerging opportunities. They rarely have access to credit and the other financial services necessary to compete in the modern world. Many face high transportation and input costs that further reduce their ability to compete. Additionally, there are some whose cultures place greater value on the maintenance of traditional ways of life, rather than on material success in a competitive world. Apart from these disadvantages, there is the wider question of whether the economic and institutional infrastructures, and the structure of policies, are favorable for small enterprises to succeeding international competition. In short, globalization presents real dangers to the rural entrepreneur, to set against the possible advantages for the wider economy.

2. Economic growth effect: As already noted, the argument in favour of globalization is the positive link between globalization and rural entrepreneurship in India. Because the potential benefits include improved access to foreign technology and managerial expertise. There have been varied views concerning the connection between trade openness and rural entrepreneurship growth, and this has given rise to a large body of empirical literature, suggesting a positive relationship between trade openness and rural entrepreneurship growth. Edwards (1998) concludes that greater openness accelerates economic growth, and that large departures from free trade dampen it. The evidence suggests that liberalizing countries outperform those who failed liberalization attempts (Michael et al., 1991). In contrast, Helleiner (1986) suggested that a certain level of national development is necessary before the objective of export-led growth can be realized. Emergence of the WTO and the series of deliberations under the Uruguay round have changed the world economic order. Indian Government has shelved the earlier protectionist policies and opened up the economy to the world market. Undoubtedly, this has helped the Indian economy to recoup its strength with the flow of international capital and technology resulting in a robust economic position. The economy is moving steadily with more than 6 per cent DGP growth rate for the last two decades or so. However, the new economic order has posed severe challenges to the agricultural and rural sectors of the economy. Overall, it indicates that

openness promotes faster growth. Still, the question remains as to what this might do for the rural enterprises, particularly as little FDI flows into agriculture, least of all small-scale agriculture. The effect of globalization on rural enterprises depends upon the changes in GDP and changes in income distribution. The evidence suggests that the rural entrepreneur overall are substantially included as beneficiaries from economic growth. However, the extent of inclusion varies internationally. As discussed earlier, free trade and openness results in faster growth. Growth might be expected to specifically benefit the rural entrepreneur to the extent that the agricultural sector is included in the economic expansion. In fact, there is little evidence that trade expansion in India has actually taken this form.

3. Technological effect: Transfer of technology is one of the prominent features of globalization and one of the major reasons for predicting improved growth. Many formerly small rural entrepreneurs saw major improvements in their businesses, but the improvements were in a very limited area and to a very limited number of entrepreneurs. The focus today is on the potentials and dangers of biotechnology. In principle, the benefits here too may be large. The benefits may be from raising productivity, reduced risks of drought and pests, as well as lower food prices. Biotechnology research has been more relevant to the problems of high-income countries. The benefits tend to be specific to particular environments, conditions or markets. As small number of multinational corporations is also carrying out much of the research. There has been a general focus upon the problems of rural entrepreneurs in rich countries, with little attention being paid to developing countries' like India's basic food crops and the problems of their small farmers.

4. Distributional Effect: It is not possible to gauge the overall effect of globalization on the level of inequality; the effect on women entrepreneur in rural area is less ambiguous. Many rural women entrepreneurs are hampered from benefiting from the changes arising from globalization. They have less access than men to education and training, less time to devote to productive activities, less command over important resources such as land, credit and capital. In income developing countries, the sexual division of labor precludes women from income derived from cash crops. In addition, they also have less incentive to respond to economic signals, since they are likely to have less control over any income.

5. Transformational and insecurity effect: Rural entrepreneurship is not always directly related to income. It can also refer to an intense level of insecurity. Many times those who have managed to improve their position are pressed back down again by natural disasters, inflation and other shocks. Some aspects of globalization increase such problems. Globalization is generally associated with the accelerated pace of change in economic life and increased competitive pressures. This requires a speedy adaptation, which may simply be outside the range of those with few modern skills or other assets. As indicated earlier, globalization is linked to increased specialization, but this, for all its advantages, increases risks for rural entrepreneurs by pushing them to 'play all their cards'. These factors are further compounded by the transformational and insecurity effect due to volatile environment. Greater financial interdependence amongst national economies, resulting from globalization, has the effect of transferring or spreading shocks from one nation to another.

This can be seen from the financial crisis in the last year (2008) which affected the world, leading to a global slowdown. The enormous cross-border movements of highly mobile financial capital and the difficulties of regulating this have resulted in the tendency for financial shocks to spreading around the world. Many of these shocks coming from the rest of the world hit the urban sector hardest. Still, there are a number of channels through which the effect is transferred to the rural enterprises.

6. Policy: Government of India has, in a sense, discriminated against agriculture and those enterprises that depend upon it. This ‘discrimination’ has typically taken the form of overvalued exchange rates, state trading monopolies for domestic and external marketing of agricultural commodities. Additionally, the revenues from commodity exports have been used for the growth of civil services and urban development, rather than reinvestment in agriculture.

Challenges faced by Rural Entrepreneurship in India: Family Challenges: Convincing to opt for business over job is easy is not an easy task for an individual. The first thing compared is – Will you make more money in the business of your choice or as a successor of family business. This is where it becomes almost impossible to convince that you can generate more cash with your passion than doing what your Dad is doing.

Social Challenges: Family challenges are always at the top because that is what matter the most but at times social challenges also are very important. Let us say you and your friend graduated at the same time. You opted for entrepreneurship and your friend opted for a job. He now has a flat, car and what not because he could easily get those with a bank loan but you still have nothing to show off and this is where the challenge comes.

Technological Challenges: Indian education system lags too much from the Job industry as a whole but then it lags even more when it comes to online entrepreneurship. What technology would be ideal and how to use that technology effectively?

Financial Challenges: (Difficulty in borrowing fund): Financial challenges are a lot different in India especially for online entrepreneurs. When you are starting out as an entrepreneur you don’t opt for venture funding but try to go to funding for small to medium business people. Many such non-technical business people don’t understand the online business models as a whole and so getting an initial business funding from them becomes challenging. The other option you can think of is a loan but bank loan is not at all an option in India for new online entrepreneurs.

Policy Challenges: Now and then there is lots of changes in the policies to change in the government. Problems of TRIPS and TRIMS. Problems of raising equity capital, Problems of availing raw-materials, Problems of obsolescence of indigenous technology Increased pollutions Ecological imbalanced. Exploitation of small and poor countries etc.

A. Opportunities

- Free entry into world trade.

- Improved risk taking ability.
- Governments of nations withdrawn some restrictions
- Technology and inventions spread into the world.
- Encouragement to innovations and inventions.
- Promotion of healthy completions among nations
- Consideration increase in government assistance for international trade.
- The establishment of other national and international institutes to support business among the nations of the world.
- Benefits of specialization.
- Social and cultural development

B. Challenges for Rural Entrepreneurs

- Growth of Mall Culture
- Poor Assistance
- Power Failure
- Lack of Technical know ho
- Capacity Utilization
- Infrastructure Sickness

C. Opportunities for Rural Entrepreneurs

- Crashed Scheme for Rural Development
- Food for Work Program
- National Rural Employment Program
- Regional Rural Development Centers
- Entrepreneurship Development Institute of India
- Bank of Technology
- Rural Innovation Funding
- Social Rural Entrepreneurship

D. Need for Creating Indian Entrepreneurs- A Snapshot: A recent Mckinsey& Company-Nasscom report estimates that India needs at least 8,000 new businesses to achieve its target of building a US\$87 billion IT sector. In the next 10 years, 110-130 million Indian citizens will be searching for jobs, including 80-100 million looking for their first jobs. In today's knowledge based economy is fertile ground for entrepreneurs, in India. It is rightly believed that India has an extraordinary talent pool with virtually limitless potential to become entrepreneurs. Therefore, it is important to get committed to creating the right environment to develop successful entrepreneurs. To achieve this, India must focus on the following area.

- Create the Right Environment for Success
- Ensure that Entrepreneurs have access to the Right Skill
- Ensure that Entrepreneurs have access to „Smart Capital“
- Enable Networking and Exchange

- **Government Support:** Both the Central and State Governments should take more interest in promoting the growth of entrepreneurship.

Problem of Rural Entrepreneurship: Entrepreneurs are playing very important role in the development of economy. They face various problems in day to day work. As the thorns are part of roses, similarly every flourishing business has its own kind of problems. Some of the major problems faced by rural entrepreneurs are as under.

Financial Problems

Paucity of Funds: Most of the rural entrepreneurs fail to get external funds due to absence of tangible security and credit in the market. The procedure to avail the loan facility is too time-consuming that its delay often disappoints the rural entrepreneurs. Lack of finance available to rural entrepreneurs is one of the biggest problems which rural entrepreneur is born now days especially due to global recession. Major difficulties faced by rural entrepreneurs include low level of purchasing power of rural consumer so sales volume is insufficient, lack of finance to start business, reduced profits due to competition, pricing of goods and services, Financial statements are difficult to be maintained by rural entrepreneur, stringent tax laws, lack of guarantees for raising up of loans, difficulty in raising capital through equity, dependence on small money lenders for loans for which they charge discriminating interest rates and huge rent and property cost. These all problems create a difficulty in raising money through loans. Landlords in Punjab proved to be a major source of finance for rural entrepreneurs but the rates of land are reduced due to global recession so they also lack hard cash nowadays. Some banks have not ventured out to serve rural customers because banks are expensive to be reached by rural customers and, once reached, are often too poor to afford bank products. Poor people often have insufficient established forms of collateral (such as physical assets) to offer, so they are often excluded from traditional financial market. The government is providing subsidies to rural areas but due to the high cost of finance, these subsidies are not giving fruitful results. Major sources of finance in rural areas are loans from regional rural banks or from zamindars but their rate of interest is usually very high. The government has various institutions for this purpose but the results are not up to the level expected. Industrial Finance Corporation of India (IFCI), Industrial development bank of India, Industrial Credit and Investment Corporation of India (ICICI), Small Scale Industry development bank of India (SIDBI) are some of the national level (SFC) institutions that are helping out rural entrepreneurs. Some state level institutions are also working like a State Financial Corporation and State Industrial Development Corporation (SIDC). These institutions provide assistance for setting up of new ventures and side by side for modernization and expansion of existing ones but their terms and conditions are very strict to be handled. Various schemes like composite loan scheme, tiny unit scheme, scheme for technical entrepreneurs etc. had started but they are unable to meet the expectation of rural entrepreneur. Raising funds through equity is little bit difficult for rural entrepreneurs because of lack of financial knowledge and also their financial corpus is also low, so loans are the primary source of finance for them which proved to be a great obstacle in developing rural entrepreneurship. Various policies of RBI regarding priority

sector lending failed to achieve its objectives. Micro financing movements started in India worked well. Self-help groups from the basic constituent unit of micro finance movement in India. Self-help groups are a group of a few individuals who pool their savings into a fund from which they can borrow as and when necessary. Such a group is linked with banks but joining an existing SHG is often a costly affair for an aspiring villager as in order to maintain parity among the members, a new member has to join by depositing the total accumulated individual savings and interest of groups. So starting new SHG is an easy as compared to join existing one. NGO's also played important role in rural development. These NGO's are usually registered as societies and trust. They have less capital resources as they cannot raise equity capital.

Conclusion: The rural development by Entrepreneurship has evolved in post independent India in positive direction. India being a developing country with 80 % rural population and 6 to 7 % GDP has paved way for a better entrepreneur development Scenario. This has been achieved by the effective policies implemented by the government and active participation of NGO's. There is a wide scope for further improvement in the area of rural Entrepreneurship development involving modern technology and scientific management strategic.
